

Earth Exploration

Date: _____ Instructors Name: _____

How did scientists come up with the theory of Pangaea?

On which layer of the earth does the crust (the plates) move around?

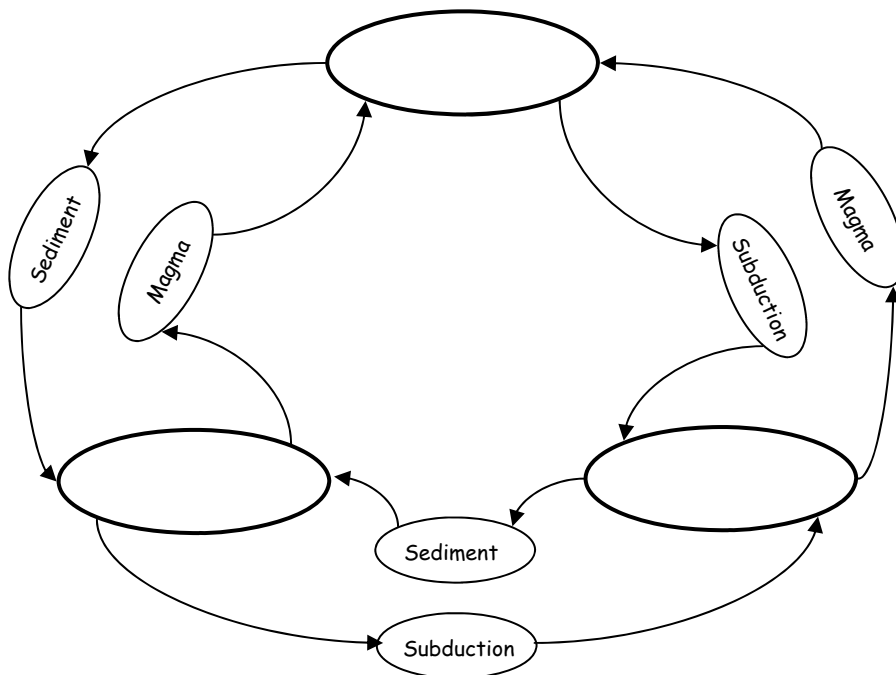

The Inner Core

The Asthenosphere

The Outer Core

The Lithosphere

The rocks that make up the earth are constantly changing form, going through what we call the rock cycle. Below, fill in the blanks of this rock cycle.

Earth Exploration

Why does Southeastern Minnesota have Limestone and Sandstone rocks?

Why does the rest of Minnesota have a lot less sedimentary rocks?

How do fossils form and why are they so commonly found in Limestone?

Below are some drawings of fossils our class found:
